

## **Rising Bollards**

**At Securitas Security Services Ireland we can provide a wide range of Rising Bollards that can be used stand alone or alongside our access control systems.**

### **Electric Rising Kerb Barrier**

Tough, reliable and un-compromising - quick response, hydraulically operated Rising Kerb Barrier provides the perfect solution for unwanted vehicle access in both manned and unmanned vehicle parks.

They also provide the perfect deterrent against the most determined intruder. The Rising Kerb features a hydraulic power pack to raise and lower the unit smoothly. A state of the art programmable logic controller co-ordinates the hydraulics, access control and traffic light signalling system. During power failure an emergency lowering facility is fitted as standard. A variety of access control options are available including, proximity card, radio, token, keypad and intercom. These, combined with induction loop or photocell safety and close facilities, ensure the rising kerb opens and closes smoothly on each of its activations.

### **Rising Bollards**

A more “aesthetic” approach to the rising kerb road blocker application, but still as effective. An hydraulic power pack driving the powder coated, or stainless steel cylinder to a raised height of either 500 or 700mm.

Each bollard comes complete with LED lighting around its top to enhance its presence. Traffic lights, photo cells, safety induction loops are all available to support your system.

Aesthetically pleasing and impassable to traffic, rising bollards provide a neat solution to preventing the passage of vehicles without the requirement for gates and have a minimal impact on the environment for car parks, town centres and historic areas.

Bollards can be used individually or up to four units and operate from a single control station. High visibility is assured by the inclusion of a set of programmable LED Traffic Lights around the top circumference of the bollard. Conforms to European Safety Standards and is CE Approved.
