

Video Security Solutions

When is the last time your security program was critically examined?

Do all the parts work as you'd like them to?

Whether you need to update a couple of cameras, add a few new areas to your visual surveillance program, or redesign your program to maximize your security spend, Securitas USA can help.

Securitas Technology Solutions

Securitas Technology Solutions (STS) is a simple solution that can provide great enhancements to your current security program. We have created turn-key solutions which can quickly upgrade your security technology. Within 30 days of signing up for our service, we can install up to 8 cameras, improve your access control at a gate, add a remote monitoring program, or create a protected zone using advanced motion detection.

For more complex systems, Securitas Technology Solutions can create an IP based, web-viewable, system that enhances the guard force's visual reach across your property and/or supplement guard hours with remote monitoring services.

For more simple applications, where you need to confirm an unwanted presence at a particular location, or when your staff will grant remote entry services and needs to confirm the visitor, we can install an analog system.

Choosing the right camera type is critical

IP Cameras

Securitas Technology Solutions uses IP cameras which are high quality cameras with excellent resolution. These all-purpose cameras provide exceptional field of view, and quality digital PTZ resolution. Because of the wide-dynamic range feature of these cameras, they can be used in areas which have extreme light variations, while retaining a sharp image in each lighting condition. IP cameras use a very low light technology that allows the cameras to capture footage in almost pitch-black conditions.

For example, cameras are often mounted facing an entry door. However, due to the sun, the camera can be "blinded" during a particular portion of the day. When that happens it is rendered unusable because the picture is bleached out and only motion and shapes are discernible. The cameras wide-dynamic range equalizes the picture so that even in the bright back light, the operator can clearly see who is entering through that door. This provides you with a quality picture and effective surveillance throughout the entire day and night.

Analog Cameras

Analog cameras provide a high quality analog picture and excellent performance under low light conditions. These cameras also use the wide-dynamic range to equalize strong backlighting. This is a lower cost alternative and a great choice for locations where high-resolution detail is not required.

For example, we know that not every viewing angle needs to be crystal clear. There are areas in your facility or parking lot which shouldn't have any traffic at certain hours of the night. By adding an analog camera we may be able to greatly enhance the security of your site by identifying and taking action on unauthorized traffic.

Table with 4 columns: Location, Focal Length, Viewing Angle, Resolution, Low Light Performance, Compression, Audio. It compares Analog Camera and two types of IP Cameras.

Our Commitment to Service

Securitas USA's priority is to help maintain a safe and secure environment for your facility, employees and visitors. Our system engineers will visit your site to conduct an examination of your existing cameras and equipment. After our security management helps assess your security needs, they will partner with you to develop a camera system that works best for your site. Securitas Technology Solutions can provide you with cutting edge cameras and software to create real-time security in cost-effective packages.

For more information on how you can improve your security program with Securitas Technology Solutions, please contact us at 877-281-5543 or visit www.securitasinc.com.
